We have quite a few Tektronix items for sale, as well as a number of vintage computer and oscilloscope items from the 1970's.

Attached are some highlights with screenshots of some of the major items we'll be bringing to the event. This list is not exhaustive, and we will have some smaller items for sale as well. Pricing is challenging, but we wanted to strike a balance between the value of similar items on eBay, combined with its general condition and scarcity. It also helps that there's no shipping cost or risk of damage through the mail.

Please also note that with all the items below, they have not been turned on or tested. We've learned from experience that while these devices may have worked 20-30 years ago, there are components that would probably need to be replaced before attempting a power-on.

1) Vintage Tektronix 4051 with Pedestal and photos of internal systems.  
\$1249 or best offer

2. Vintage Tektronix 4012 with Pedestal and photos of internal systems.
